

Anthracite Thermostatic Radiator Valve (TRVs)

Westco has introduced a sophisticated addition to its Westerm Classic TRV range. The Westerm Classic Anthracite TRV boasts a stylish coloured thermostatic head, manual & lockshield cap, combined with a polished chromed body. The Anthracite is designed to complement modern radiators and is the perfect choice for contemporary, fashionable homes.

With a chrome indicator, providing a visual aid of the setting from a distance. This TRV is exclusive to Westco and comes with the following features & benefits:

- Liquid Sensor
- M30 head
- EN 215
- Key-marked
- Polished Body
- 1.0 Bar flow differential
- 10 Bar rated
- Bi-directional Angle Pattern

Fitting TRVs to a home central heating system can improve both comfort and energy efficiency. By monitoring the air temperature, TRVs reduce the flow of water through a radiator when the temperature reaches a certain setting. TRVs can also be used to introduce zone control measures, with rooms that are used often set to a higher temperature to beat the chill, and rooms that are unused kept to a minimum heat (or even switched off).
