

STH Westco introduces new copper press range.

Heating and plumbing product specialist STH Westco has added a new copper press range to its extensive portfolio. With more and more sites no longer permitting Hot Works, copper press is fast becoming the first alternative for the professional installer.

The STH Copper Press “M” Profile Range, is compatible with NOVOPRESS, REMS & ROTHENBERGER press tools, the copper press range boasts a wide array of benefits, including:

- Fast installation time
- No solder, flux or torch required.
- No requirement for Hot Work permit or insurance
- No cool down time
- Max pressure 16 bar
- Temperate range -24 C to 110 C

Suitable for a range of applications, including Hot Water, Cold Water, Potable Water and Heating, the STH Westco copper press range is WRAS approved (15mm to 54mm) and made in accordance with EN 1254 (complete range). All products have permanent engraved identification markings, are provided in sealed bags with product identification labels, and come with a 10-year warranty.

Because the product is provided by STH Westco – which boasts a 57,000sqft warehouse and an ever-growing range of over 5,500 product lines – the range also offers competitive pricing, consistent stock levels, and products which are available for immediate dispatch. Copper metric fittings from 15mm to 54mm inclusive are already available, with more products being added throughout 2021. The full range is available in the STH Westco 2021 Copper Press catalogue. Alternatively, STH Westco customers can contact their Area Sales Manager to find out more.
