FRANCIS PEGLER

A history and heritage of market leading design

1899

Francis Pegler inherited the Northern Rubber Co but he was keen to expand the business. He met Fred Birchall, who had gained experience as a brass founder, at the Hexthrope Brass and Iron works in Doncaster, and rose through the ranks to become manager. Francis agreed to put up the money for Fred to start a new operation and Pegler Brothers and Co was established.

Using the latest methods at the time, they soon expanded from manufacturing products for the steam industry to manufacturing other complex valves. One of the catalysts for this expansion was the screw down tap. The tap was invented in 1845 but had not been successfully mass-produced before Pegler's inception.

1913

Fred Birchall wanted to have the most advanced factory in the country and took a trip to the USA in order to look at the world's most advanced manufacturing companies of the time. On his return he introduced revolutionary manufacturing techniques. Followed by a more sophisticated quality control system the following year. Carefully designed packaging brought products to customers in perfect condition, another concept way ahead of its time.

1940's
- 60's

Moving into the 1940's Pegler developed the UK's first auto shut off taps which was a major advancement in tap design. Moving into the 1950's Pegler began to design taps to British Standard 1010, and then in the 60's Pegler introduced compact non rising headwork's in luxury taps.

1990's

A design collaboration with Porsche for luxury tap ranges, leading the way for premium and stylish taps in today's market.

2019

Francis Pegler brand is transferred to Standard Hidraulica Group (STH Westco in the UK).

Design, approvals & STANDARDS

We are dedicated to designing, developing and manufacturing products of the highest quality. Our products, where applicable, comply with the relevant British, European and International standards.

The Unified **WATER LABEL**

The aim of the Unified Water Label for consumers is an easy to identify and simple to understand label detailing water consumption to allow for an informed choice. For manufacturers, the aim is to promote use of smart technology for products that deliver on performance whilst providing consumers with sustainable products.

The following smart Eco technology is included in our products where these symbols are displayed.

Eco Aerator: The Neoperl PCA Dual core aerators limit maximum flow 8L/Min for kitchen products whilst comfort of usage remains the same.

Cold Open: The Cold open cartridge system ensures mixer opens with cold water only avoiding the unnecessary use of hot water to deliver energy savings. The one way opening also prevents any potential clash with tiles or backboards.

FRANCIS PEGLER

As part of our environmental commitment to reduce water usage many of our platinum level products are now fitted with a Neoperl PCA Dual Core aerator.

This allows for early aeration at lower pressure giving users a full and pleasant water stream whilst limiting the flow at higher pressure to reducing water usage without reducing performance.

We understand that sometimes a flow straightener will still be required and this option can be found as part of the fitting kit supplied.
